Eco-labelling program is an voluntary certification program to choose eco-products which use less material and energy or generate less environmental pollutant relatively among the products with same function and to award it Eco-Label. The program enable consumer to have environmental information of product and corporate to produceeco-product reflecting consumer's needs.

Eco-labelling program initially implemented in Germany in 1979, now spreads out to almost 40 countries including Japan, U.S., Canada, Nordic countries and European Union(EU). Korea Eco-labelling program has been conducted since April, 1992. This program provides consumer with opportunities to contribute environmental protection by buying eco-labelled product and corporation with opportunities to meet consumer's needs through developing eco-friendly product and technology so that realize sustainable production and consumption society.
