Design your premium business style

Samsung GALAXY Note 3 and Samsung GALAXY Note 10.1
Overview for business
Professionals want a premium mobile device designed for efficient business use

With the growth of enterprise mobility driven by the Bring Your Own Device (BYOD) trend, professionals and organizations need devices that are optimally designed for business use. Today’s mobile business professionals also seek devices that can improve work productivity with enhanced usability and innovative features.

A key requirement for the business use of mobile devices is an increased screen size. Mobile professionals need larger screens with bigger working areas to perform typical business functions. For example, these individuals use mobile devices to view and edit data and documents, and to display graphics and videos. An increased screen size provides greater content visibility and enhances the user’s business productivity.

Another enterprise mobility necessity is the ability to quickly and easily write business information on a smart device. Busy professionals can’t waste time or risk losing business opportunities through inefficiency. Scrambling to find a piece of paper, waiting for a note-taking application to open or struggling to type information on a tiny keyboard are simply unproductive ways to take notes. Rather, business professionals need devices on which they can easily and efficiently scribble important information using a digitized pen.

Business users need a single device that integrates premium style, powerful multitasking capability and enhanced productivity. They’re looking for a truly smart device with an upscale, professional appearance.

Enhance your working style with an elegant design, powerful multitasking and greater productivity

Samsung GALAXY Note 3 and Samsung GALAXY Note 10.1 2014 Edition provide all the capability and efficiency you need to accomplish your business tasks while exhibiting a refined sense of professional style. GALAXY Note 3, with its 5.7-inch screen and GALAXY Note 10.1 2014 Edition with its 10.1-inch display are premium note devices. Both are packed with features that give you more creativity, productivity and portability than ever before.

Premium style

Samsung GALAXY Note devices deliver a premium product design and working style that combine a classic look with innovative features. The devices’ stylish yet ergonomic design offers optimal portability and mobility without sacrificing multitasking or productivity. GALAXY Note devices feature a My Magazine user interface (UI) that lets you browse and access business content through a beautiful tile layout. Plus, the UI gives you convenient access to frequently used menus so that your most-often used functions are accessible with the click of a button.

Powerful multitasking

A 5.7-inch Full High Definition (FHD) or 10.1-inch Wide Quad Extended Graphics Array (WQXGA) display with advanced multi-window functionality provides all the room you need for multitasking with crystal-clear viewing. Plus, you can collect access and organize content more easily with features like Scrapbook, Multi Window and Pen Window.

Enhanced productivity

With S Pen, you can boost your productivity off the charts using S Note and other business-oriented features. The versatile S Pen allows you to directly write memos, easily find and edit them, and instantly link to action. This innovative input method transforms your traditional analog activities into convenient, sophisticated digital operations. You’ll whiz through daily business tasks with Air Command, Direct Pen Input, Voice Recorder, S Finder and Action Memo functionalities.

Figure 1. Premium design with enhanced productivity features.
Drive a smart, progressive work style with advanced multitasking features

Samsung GALAXY Note 3 and Samsung GALAXY Note 10.1 2014 Edition improve your ability to multitask with a large screen. The advanced functionality offers greater access and flexibility for working with all your business information.

Enrich your business identity with a prestigious leading-edge device

Samsung GALAXY Note 3 and Samsung GALAXY Note 10.1 2014 Edition offer an elegant product design combined with innovative technologies. Together, these features meet the demands of business professionals with a distinguished, stylish look.

Extend your professional image with a classic, yet modern design

A soft-textured, leather-like cover with finely crafted stitches on the back side of the device enhances your business image. The elegant, yet durable cover also makes your smart device more resistant to scratches or cracks, and enhances its usability. This luxurious styling makes your GALAXY Note device much more than just a tool. It becomes an extension of your business identity.

Enjoy browsing content in an elegant, magazine-style display

A large, personalized screen provides a magazine-like viewing experience that shows your personalized news, social networking sites (SNS) feeds, emails, to-do lists and more. It offers an overall view of the menu at a glance, and lets you instantly browse through your business content. You can keep up with the latest business trends and important information in a magazine-like live stream. Plus, you can conveniently access the menus that you frequently use with just the click of a button. The viewing experience helps reduce the time and effort spent organizing and updating information.

Efficiently multitask with Multi Window

You can use the Multi Window feature and full-screen view to productively work on several tasks simultaneously. By using ‘Drag & Drop’ mode in the new Multi Window, you can easily and instantaneously drag and drop words or captured images from one window to another. This feature enhances your work efficiency by reducing the time spent opening and closing windows or switching between them when you’re using different business applications. In addition, you can now open the same application in two windows at the same time. This ability enables you to check for a new email from your manager while writing an email to a colleague in another window. Or, you can instant message a client in one window while requesting a service call for the client in another instant message window. The Samsung GALAXY Note device’s multitasking features help you take multitasking to the next level.
Access essential data and features instantly with Air Command

The Air Command feature gives you fast, ready access to the essential business features on your mobile device. With Air Command, you can quickly respond to any business circumstance by accessing important features with just a click of the S Pen button. This advanced feature provides near-instantaneous access to information and a quick command of tools so that you can take immediate action.

When using Air Command, you can display a menu of key S Pen features even before S Pen touches the device. Then, you can select a feature directly with the pen. You can also display a menu of relevant features before using applications such as Gallery, email and S Note, and use the features by simply clicking the S Pen button. The quick menus eliminate the hassle of going back and forth between applications because the useful features are already at your command.

Air Command provides direct access to the following essential features:

- Action Memo
- Scrapbook
- Screen Write
- S Finder
- Pen Window

Figure 4. A menu of key S Pen features accessible with Air Command.

Easily manage your business data with Scrapbook

The handy Scrapbook feature helps you collect a variety of business content including web pages, videos and other information, and easily organize it in one place. Scrapbook eliminates the typical hassles of organizing data or tracking down content from various sources. Instead, you can effectively manage your business data and later return to the information and sources with ease.

Simply click the button on S Pen and select Scrapbooker from the Air Command menu to store and manage data and information on your digital notebook. You can also categorize the information in groups to create a personalized business scrapbook. While capturing information, you can selectively clip a particular area of display using S Pen. There’s no need to capture the entire screen. You can even add detailed memos and original source information along with the captured content for quicker, easier access at a later time.

The Scrapbook feature improves the organization of business information and easier access to the saved data to help you to conduct business in a well-organized, smart manner.

Heighten your productivity with business-oriented features

Samsung GALAXY Note 3 and Samsung GALAXY Note 10.1 2014 Edition give you the tools you need to be more productive and better organized.

Quickly perform additional simple tasks with Pen Window

S Pen helps you rapidly complete work tasks by optimizing the use of business applications, such as messaging, contacts and email on open windows. You can use S Pen to activate these applications wherever you want them on the screen. Samsung GALAXY Note devices allow you to multitask through new windows without interrupting your work in the main window. With S Pen, you can gain greater multitasking flexibility by positioning and resizing your business applications. Simply draw a stroke to activate a tool that has the same size of stroke’s boundary, and then select applications from menus that automatically offer suggestions. You can also control the size of the application window and move it around for even more multitasking capabilities.

A synergy of portability, productivity and style.
Turn handwritten notes into productive business operations with Action Memo

Action Memo is an easy-to-use handwriting recognition feature that enables you to spring into instant action when the business situation demands it. With Action Memo, handwritten notes activate related functions so that you can quickly and efficiently perform business operations. Following are examples of functions that you can activate with Action Memo.

- **Quick memo** allows you to write memos instantly without having to open a memo application by double tapping with S Pen or Air Command.

- **Link to action** displays related features when you write words. You can use this feature to make a call, find a location or contact, search the Internet, send an email or add a task.

- **Minimize** reduces Action Memo to a small icon so that you can quickly view other applications and write at the same time. You can later reactivate Action Memo to use its functions whenever you need them.

Perform tasks more easily through Direct Pen Input

Direct Pen Input enables you to make calls, send messages and set alarms by simply handwriting the commands. Direct Pen advanced handwriting recognition technology allows the screen to accurately interpret nearly all writing styles. Now, your handwriting is recognized in message, planner, and alarm and phone functions, as well as in notes. For easy access, a folded paper icon for direct handwriting input appears on the screen when you hold S Pen over a text input field. Using Direct Pen Input enhances your productivity and professional appearance.

Find anything instantaneously with S Finder

S Finder is a smart, powerful search function that instantly finds a variety of content, including handwriting. The S Finder feature supports your smart work style and increases your productivity by reducing the time and effort you spend organizing information by content type. You can quickly search, access and activate nearly any information or data stored on the device or the web. Convenient filters help you search relevant content based on date, location or content type. You can also find information that was previously input or stored as handwriting by simply writing on the device with S Pen. For even greater efficiency, S Finder suggests related functions such as calls, messages or settings for you to use immediately after the search.

Figure 5. S Finder feature for instantaneously searching a variety of content.
Choose the optimal device for your business environment

Samsung GALAXY Note devices offer a selection of models that are each equipped with an ideal set of business-oriented features. You can choose the Samsung GALAXY Note device that best suits your role, industry and professional identity.

Samsung GALAXY Note 3

Samsung GALAXY Note 3, with its 5.7-inch screen, balances the best of mobility, performance and efficiency in a premium design to support all your professional activities. With a thin size, light weight and firm hand-held grip, you can bring your device along wherever your business takes you.

Gain usability and portability with advanced business features

The highly portable size and a wide FHD screen of Samsung GALAXY Note 3 make it the optimal choice for mobility in any business situation, whether you’re going to a conference, visiting client sites or traveling to any business location. For example, you can use its handy S Pen to take notes in a meeting or look up a client’s address with S Finder.

Capture important business information with Voice Recorder

Voice Recorder gives you advanced recording capability to obtain high quality recordings of important information and to capture sounds clearly in various environments. Following are the Voice Recorder innovative recording options.

- Normal mode gathers sounds from surrounding environment.
- Interview mode collects sounds from only the upper side of the device to capture the speaker’s voice.
- Conversational mode records sounds from both the upper and lower sides of the device to capture sounds from both speakers.

After recording, you can easily access specific parts of a recorded file using the Bookmark function. You can also conveniently remove the silent parts of a recording with the Silence Remove function.

Samsung GALAXY Note 10.1 2014 Edition

Samsung GALAXY Note 10.1 2014 Edition is designed to help you handle complex and simple tasks with ease. Its powerful multitasking features, high WQXGA resolution display and performance offer the utmost convenience and usability. It’s ideal for sharing business content with colleagues and clients, and for multitasking with complex files such as spreadsheets and presentations.

Keep your business mobile with a large screen and enhanced portability

The new Samsung GALAXY Note 10.1 2014 Edition offers a lighter, slimmer and sleeker design with the same large 10.1-inch display as its predecessor. The sizeable display provides a roomy area in which you can activate multiple windows, just like the display on your laptop PC. With a weight of only 540g (WiFi) or 547g (3G, LTE), the note device is easy to hold. And, a longer-lasting battery allows you to continue working for longer periods without recharging.

Samsung GALAXY Note 10.1 2014 Edition helps you handle quick and complex work tasks with ease. The device is optimized for business situations such as working in a taxi or at an airport while waiting for a departure, in a client meeting, or in a hotel room while on a business trip.

Create and edit business information quickly and easily with a comprehensive note-taking solution

S Note provides convenient note-taking functionality using S Pen, including the ability to manage notes, documents, charts and other business data.

Figure 6. New S Note: a comprehensive solution for note-taking.
Discover the perfect business assistant: Samsung GALAXY Gear

Samsung GALAXY Gear is a breakthrough innovation that enables you to use the key functions of your mobile device quickly and easily with greater freedom. Best of all, you don’t even have to remove the device from your pocket. Samsung GALAXY Gear delivers Hands-Free Communication with commands that work at the sound of your voice that are recognized by a built-in speaker. It offers Instant Access to Notifications that enables you to quickly view notifications without having to unlock or open messages and other applications. In addition, Samsung GALAXY Gear provides Instant Capture of the Moment to help you capture video or photo information instantaneously.

Following are the Samsung GALAXY Gear companion device’s key features.

Use your voice to conveniently access functions with Hands-Free Communication

Using a built-in speaker, the Hands-Free Communication feature provides commands that work at the sound of your voice that are recognized by a built-in speaker.

- **Call** enables you to make a call with your voice or receive a call with a quick swipe on your wrist. You can perform either action with Samsung GALAXY Gear without having to take out your mobile device out of a bag or pocket. This function helps you communicate important business information instantly. A built-in speaker lets you talk without holding the device in your hands, so you can continue with previous actions during a call.

- **S Voice** allows you to initiate commands to your mobile device through simple touch and voice. This function saves you time and helps you focus on the content of the communication and updated information. For example, you can create a schedule, check messages and more by pressing the power key twice or dragging the screen up.

Quickly view and respond to messages with Instant Access to Notifications

With Instant Access to Notifications, you can view notifications at a glance without having to unlock or open the messages or other applications.

- **Notification** alerts you to updated information on your mobile device, so that you can instantly check the information without having to look at the screen. With Notification, you can follow up on missed calls, messages, Social Networking Sites (SNS) updates, emails and so on, without missing important information.

- **Smart Relay** improving your response to urgent business situations by automatically unlocking your device for a quick review in the event of a newly arrived message or a missed call. You can instantly see the notifications, and avoid the long process of taking the device out, unlocking it, opening the application, and finding the new information.

Grab important business data with Instant Capture of the Moment

Instant Capture of the Moment helps you instantly take videos, photos and speech-to-text memos.

- **Memographer** lets you easily record video and take photos with the device on your wrist to immediately capture important business moments. It helps ensure that you won’t miss important details. Simply swipe and touch on the Samsung GALAXY Gear to capture the video or photo with advanced features such as Sound & Shot. Then, you can share the information instantaneously with colleagues by uploading it on SNS or sending it in an email.

- **Voice Memo** can be used to record ideas with an immediate memo, so that important thoughts don’t slip away from your memory. Use Voice Memo to simply speak your thoughts to the gear on your wrist. Samsung GALAXY Gear records the information as text through a brilliant Speech to Text feature, so that you can easily refer back to it later.
Envision a smarter, more mobile working environment with Samsung GALAXY Note devices and Samsung GALAXY Gear scenarios

Following are examples of how Samsung GALAXY Note devices and Samsung GALAXY Gear can be leveraged in mobile enterprise environments.

A timely alert and rapid response win repeat business
Chloe is running through an airport, racing to catch a flight to a client meeting. She’s carrying a design portfolio and rolling her carryon luggage while sipping a cup of coffee. Suddenly, her Samsung GALAXY Gear Notification feature alerts her to a message from the client. Without stopping or reaching into her bag, Chloe checks the message on her GALAXY Gear and places a call using S Voice to confirm the client’s request. Just in time, she boards the plane moments before the door closes.

Upon taking her seat, Chloe’s GALAXY Gear notifies her that the client sent an email with some sketches. Samsung GALAXY Gear Smart Relay automatically shows the message with the drawings on Chloe’s GALAXY Note 3, and she makes some notes and changes to them using the S Pen. She just has time to finish marking the changes before the flight attendant announces that electronic devices must be powered off for the flight. By the time Chloe lands, she has already formulated several ways to meet the client’s new design request. She arrives at the customer’s facility on time, with three updated designs. After reviewing the designs on Chloe’s GALAXY Note 3, the client is so impressed that she offers Chloe an ongoing contract.

Quick fulfillment of a manager’s complex request helps an employee shine
While driving to pick up his daughter from ballet practice one evening, Joe receives a call from his manager. She tells him she needs him to develop a presentation of their department’s successful, third-quarter ad campaigns by the next morning. Joe knows that the task involves piecing together spreadsheet data, images of ad layouts and newspaper articles. His manager also requests the inclusion of a short video clip that shows her receiving a creativity award. Although challenged by the short timeframe, Joe finishes the task competently thanks to Samsung GALAXY Note 10.1 2014 Edition’s productivity features.

While waiting for his daughter outside the studio, Joe immediately whips out his S Pen and begins drafting the presentation, drawing windows to access and modify word processing documents, articles and financial data. The data is organized in Scrapbook, which makes it easier to retrieve. Direct Pen Input recognizes his handwriting, and speeds up the process. By the time his daughter emerges from practice, Joe is well on his way to completing the assignment.

Next morning, upon his arrival at his office, he previews the presentation with his manager. She can clearly see how it will display on the conference room screen, thanks to the mobile device’s large screen. She seems pleased with the presentation until the middle of the preview, when she stops Joe and says, “Oh no, not that set of ad layouts. I meant the other one.”

Joe uses S Finder to quickly search through mix of stored videos, images and documents. Together, he and his manager quickly locate the new information. With the sources stored along with the data, he easily and immediately downloads the information and adds it to the presentation. A few minutes later, he emails the completed work to his boss. As she takes the podium, smiling, Joe breathes a huge sigh of relief, knowing he just earned a big compliment.

Capturing an image of a client’s planned system and recording a great idea save the day
Alice’s customer is researching the purchase of software that will be compatible with a new system that the company is planning to install next year. During a consultation meeting, the lead designer draws a diagram of the proposed system on a whiteboard. As the designer moves the discussion on to the next topic, he starts to erase the drawing. Alice quickly raises her hand and asks if she can capture an image of the diagram. Anxious to continue with the meeting without a delay, the designer reluctantly agrees. Without having to reach into her briefcase, Alice surprises him by quickly snapping a photo using the Samsung GALAXY Gear Memographer on her wrist, and the meeting continues without interruption.

Later, while walking down a hallway on a break, Alice records an idea for how to resolve the client’s compatibility issue on her GALAXY Note 3 using Samsung GALAXY Gear Voice Memo. Upon returning to her office, Alice retrieves the whiteboard image and recorded memo. She easily displays them for an internal software engineer on her GALAXY Note 10.1 2014 Edition’s large screen. They use the information to collaborate on a plan that resolves the compatibility issue. Ultimately, Alice’s idea garners a new software contract with her client.
**Conclusion**

Business professionals and organizations need mobile devices that are designed for efficient business use. To achieve true enterprise mobility, today’s business users seek devices with improved work productivity, enhanced usability and innovative features. They also want mobile devices that reflect a sense of professionalism and style.

Samsung GALAXY Note 3 and Samsung GALAXY Note 10.1 2014 Edition premium devices offer a larger screen size, enhanced viewing experience and quick access to productivity features.

These innovative devices enable powerful multitasking through a large, crystal-clear display. They also boost productivity with convenient S Pen access and operations.

With efficient functionality at your fingertips or through the sound of your voice, Samsung GALAXY Note devices offer a whole new way to work. In addition, all of this advanced capability is wrapped up in an elegant, well-crafted design that showcases your distinguished style.

Samsung Enterprise Mobility Portfolio

Solution

Samsung KNOX

With the increasing use of smartphones in the business environment, the need for enterprise mobile security also increases. Samsung KNOX is a new Android-based mobile solution designed specifically to satisfy enterprise security requirements. It enables enterprises to support both BYOD and Corporate-Liable models without compromising corporate security or employee privacy.

Platform Security

Samsung KNOX addresses platform security using a comprehensive three-pronged strategy.

• **Trusted Boot.** Trusted Boot is a primary component that forms the first line of defense against malicious attacks on devices equipped with Samsung KNOX. Trusted Boot ensures that only verified and authorized software can run on the device by providing recorded evidence of firmware running on the device in the form of measurements stored securely in TrustZone. At system run time, TrustZone applications on the KNOX platform will use these measurements to make security critical decisions, such as verifying the release of security keys and container activation.

• **TrustZone-based Integrity Measurement Architecture (TIMA).** TIMA runs in the secure world and provides continuous integrity monitoring of the Linux kernel. When TIMA detects that the integrity of the kernel or the boot loader is violated, it notifies the enterprise IT via MDM which can then take policy-driven action in response. One of the policy actions that the integrity of the kernel or the boot loader is violated, it notifies the enterprise IT via MDM which can then take policy-driven action in response. One of the policy actions that the integrity of the kernel or the boot loader is violated, it notifies the enterprise IT via MDM which can then take policy-driven action in response. One of the policy actions that the integrity of the kernel or the boot loader is violated, it notifies the enterprise IT via MDM which can then take policy-driven action in response. One of the policy actions that the integrity of the kernel or the boot loader is violated, it notifies the enterprise IT via MDM which can then take policy-driven action in response.

• **Security Enhancements for Android.** This feature provides an enhanced mechanism to enforce the separation of information based on confidentiality and integrity requirements. Security Enhancements for Android isolates applications and data into different domains so that threats of tampering and bypassing of application security mechanisms are reduced. In addition, the amount of damage that can be caused by malicious or flawed applications is minimized.

Mobile Device Management

Samsung KNOX builds upon Samsung's industry leading SAFE® MDM capabilities by providing additional policies for security, enterprise integration, and enterprise applications such as asset tracking, remote control, and so on.

• **Specific MDM enhancements include:**
  - Policies to comply with the US DoD Mobile OS Security Requirements Guide (MOS SRG)
  - Support for Samsung KNOX Container
  - Support for management via ActiveDirectory/Group Policy Manager
  - VPN and Wi-Fi Provisioning
  - Idle screen and lock screen configuration

Application Security

• **Samsung KNOX Container.** Samsung KNOX Container provides security for enterprise data by creating a secure zone in the employee’s device for corporate applications and encrypting enterprise data both at-rest and in motion. Samsung KNOX Container is an isolated and secure environment within the mobile device, complete with its own home screen, launcher, applications and widgets. Applications and data inside the container are separated from applications outside the container, and a password is required to gain access to them. Samsung KNOX Container provides a powerful solution for data leakage problems associated with the Bring Your Own Device (BYOD) model.

• **The On-device Data Encryption (ODE).** The ODE feature allows users and enterprise IT administrators to encrypt data on the entire device, as well as any configured Samsung KNOX Container. The data is encrypted using a FIPS 140-2 compliant Advanced Encryption Standard (AES) cipher algorithm with a 256-bit key (AES-256) and offers the levels of security required by government and regulated industries.

• **Virtual Private Network.** Samsung KNOX offers an on-demand FIPS-certified VPN client called per-app VPN. The Per-app VPN provides enterprise IT administrators with the ability to configure, provision and manage the use of VPN on a per-application basis. This capability allows the enterprise to automatically enforce the use of VPN only on a specific set of corporate applications. Samsung KNOX VPN offers support for strong IPSec VPN encryption for most sensitive government agencies, including support for Suite B cryptography.

• **Samsung KNOX for IT Managers.** With its multi-layered security model and industry-leading device management capability, Samsung KNOX meets needs of even the most demanding business environments. Furthermore, Samsung KNOX Container technology can be used to separate business and personal use of a mobile device. Lightweight and compatible with existing common enterprise infrastructure, Samsung KNOX provides reassurance and convenience for IT departments looking to implement and manage BYOD strategies.

• **Samsung KNOX for IT Employees.** Samsung KNOX offers a seamless and intuitive dualpersona platform for situations in which a single Samsung device is used for both work and personal use. Samsung KNOX Container provides reassurance that the employee’s personal applications and data are safe and separate from the work environment.

• **Samsung KNOX for Partners.** Samsung KNOX enables existing Android ecosystem applications to automatically gain enterprise-grade security for data storage and transmission without any new application development. Samsung KNOX also relieves application developers from the burden of developing individual enterprise features such as FIPS-compliant VPN, on-device encryption (ODE), and enterprise Single Sign On (SSO).

Benefits of Samsung KNOX

• Samsung KNOX builds upon Samsung's industry leading SAFE® MDM capabilities by providing additional policies for security, enterprise integration, and enterprise applications such as asset tracking, remote control, and so on.

• **Specific MDM enhancements include:**
  - Policies to comply with the US DoD Mobile OS Security Requirements Guide (MOS SRG)
  - Support for Samsung KNOX Container
  - Support for management via ActiveDirectory/Group Policy Manager
  - VPN and Wi-Fi Provisioning
  - Idle screen and lock screen configuration

Messaging

Microsoft EAS (Exchange ActiveSync)

EAS is a communication protocol designed for the synchronization of email, contacts and calendars between a messaging server and mobile de-vices, enabling seamless connection to business functions.

IBM Lotus Notes

IBM Lotus Notes is a push-type email solution that provides quick access to email, calendars, address books, journals and to-do lists for Lotus Notes mobile users.

### Solution

<table>
<thead>
<tr>
<th>MDM</th>
<th>Absolute Manage MDM</th>
</tr>
</thead>
<tbody>
<tr>
<td>SAP Afaria</td>
<td>Absolute Manage MDM enables organizations to remotely manage smartphones, tablets and PCs all from a single console. The solution includes support for employee-owned devices and a web-based user interface (UI) that enables IT support personnel to perform select security and administrative tasks while on the go.</td>
</tr>
</tbody>
</table>

### Airwatch MDM

Airwatch MDM provides complete mobile device management for Samsung for Enterprise (SAFE) and Samsung KNOX GALAXY S smartphones, GALAXY tablets and GALAXY Note devices. SAFE devices are enterprise-ready, with enhanced device-level security and management capabilities. KNOX devices offer even more enhanced security at a container level.

### MobileIron Mobile IT Platform

The MobileIron Mobile IT Platform secures and manages mobile apps, documents and devices for global organizations. It supports both corporate-owned and individual-owned devices, offering true multi-OS management across the leading mobile OS platforms.

### SAP Afaria

SAP Afaria is a solution that simplifies management of a mobile workforce by ensuring the security of data that is stored and transmitted by mobile devices. A single administration console centrally manages, secures and deploys mobile data, applications and devices.

### Absolute Manage MDM

Absolute Manage MDM enables organizations to remotely manage smartphones, tablets and PCs all from a single console. The solution includes support for employee-owned devices and a web-based user interface (UI) that enables IT support personnel to perform select security and administrative tasks while on the go.

### Citrix XenMobile Enterprise MDM

Citrix XenMobile Enterprise MDM is a robust mobile device management solution that delivers role-based management, configuration and security for both company-owned and employee-owned mobile devices. The solution enables employees to use any device they choose, while IT ensures compliance of corporate assets and secure corporate content.

### SOTI MobiControl

SOTI MobiControl solves the unique challenges involved in managing, securing, supporting and tracking mobile and desktop computing devices across all platforms. The solution allows organizations to empower enterprise mobility through support for corporate-owned and BYOD policies.

### Samsung SDS MDM

Samsung SDS Mobile Device Management (MDM) provides the comprehensive capabilities that allow employees to access legacy systems with mobile devices.

### Unified Communications and Collaboration (UC&C)

<tr>
<td>Warranty service extends the service period within the standard service warranty scope.</td>
</tr>
</tbody>
</table>

**Accidental Damage Care Service**

These services include repair services for damages caused by various types of accidents that are typically not covered under a basic warranty. Damages include breakage, water damage, electrical surges and drops.

**Remote Care Service**

This service is a device exchange service that helps customers to continue doing business with an extra buffer stock of devices, ensuring that business continues while a broken or damaged device is being repaired.
