

Samsung Solution: Pcounter

Control and recover printing costs, increase document security and gather the information you need to maximise the return on your printing investment.

A flexible, scalable, server-based document management and accounting solution

Solution Overview

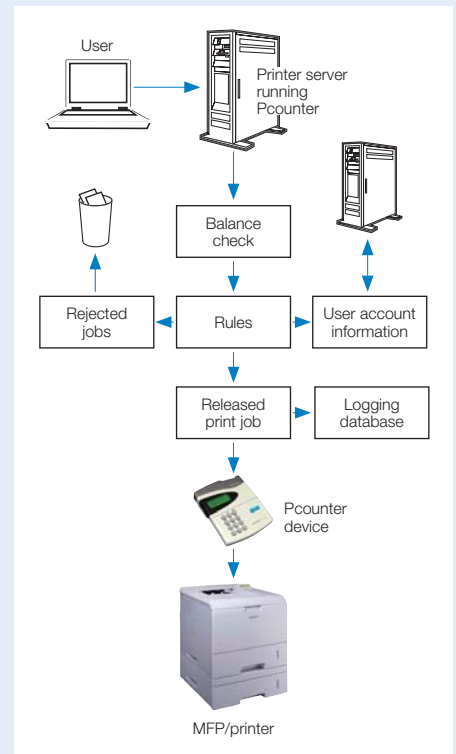

Much office cost and waste results from inappropriate or extravagant use of printing assets and consumables. This can be through redundant printing or not printing on the most cost-effective printer. Pcounter makes users aware of these costs. It logs print job details to provide a solid audit trail, it provides real-time enforcement of checks that help limit waste and abuse, and makes it possible to recover print costs by billing or prepaying. But not least, the information from Pcounter goes beyond getting the most out of the available printing assets. By helping you evaluate printer use, it helps you rationalise and reconfigure your printing infrastructure for greater efficiency.

Release print jobs securely using a keypad terminal

With Pcounter you can set up a client billing system for print output

Pcounter Administrator: Client codes			
Client code	Description	Subcode	Description
77700	Administrative Group - Attorneys	0010	Board of Directors Meeting
77702	Pro-Dono	0020	Executive Committee Activities
77703	Personal Time	0030	Vacation
77706	Professional Activities Group	0040	Department/Subgroup Activities
77707	Miscellaneous Firm Business	0060	Employee Benefits Comm. Activities
77709	Client Development/Firm Seminar	0500	Stockholder Meeting
		0800	Other Committee Activities

Benefits

- Accountability of who printed which job on which printer, when and at what cost
- Accurate assessment of printer use
- Cost savings by eliminating waste and misuse
- Control costs by monitoring and enforcing print policies, or allocating print quotas
- Recover costs through billing or prepaid printing
- Print sensitive information securely

Features

- Supported on all Microsoft Windows / Active Directory, Novell Network and NDPS servers
- Works with Samba on Linux and Unix
- Supports accounting of print jobs from any network workstation including MAC and Unix clients
- Pcounter Web Client enables communication support for MACs and other non-Windows clients
- Supports for cluster and LDAP
- Supports accounting for any PCL and Postscript printer
- No user set-up required - auto detects user's login
- Supports users that do not have network ID
- Runs without adding any significant processing or resources overhead

Usage Areas

- Public sector and general office, to control costs and maximise return on printing investments
- Education and libraries, or anywhere needing to charge for and control access to printing
- Architects, consultants, the legal professions, or anybody needing to bill clients for printouts

Printer Compatibility

- Works for networked Samsung printers and Samsung MFPs in Windows, non-Windows and Thin Client environment
