

Samsung Solution: Axiar Deliver-Cluster

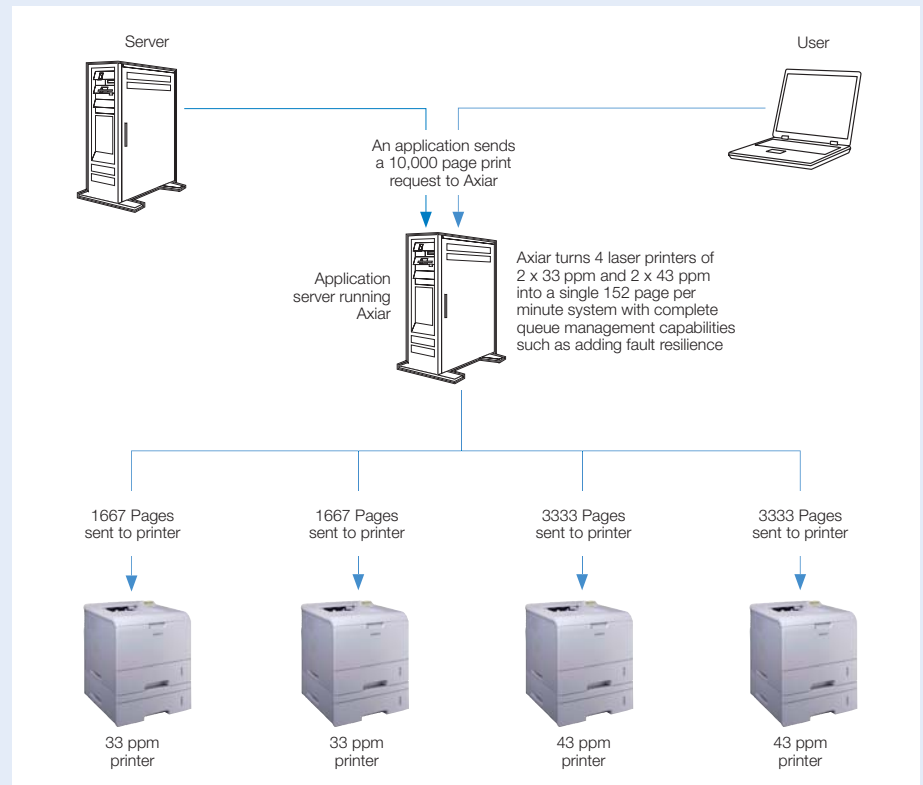

Cluster printers to ensure high-volume and mission critical print jobs are printed as quickly and reliably as possible

SAMSUNG

A server-based network printing software solution that eases management of printing environments

Solution Overview

To reap the full potential of your investment in printing hardware, you need to be able to harness the power of multiple print engines to deliver maximum printing throughput and maximum printer uptime. Axiar Deliver-Cluster is a print queue management solution that manages print jobs and print environments to give you maximum control of printing. It automatically splits large print files across clusters of printers. It also detects errors and only sends print jobs to working printers to guarantee completion of mission critical print jobs.

Benefits

- Installs on any UNIX, Linux or Windows server on the network and does not need a dedicated server – also runs on AS/400 (iSeries)
- Splits jobs proportionally based on printer speeds
- IT managers can install quickly; users can easily manage jobs with AXIAR's Java GUI
- Clustered printers can be used in or out of the cluster
- Users quickly recoup their investment by increasing throughput speed, improving printing reliability and reducing their dependence on large single engine high-speed laser printers
- Ideal for speeding up business critical information delivery (invoices, purchase

orders, checks, reports, and so on) created by business application software (including Oracle, SAP, PeopleSoft, QAD)

Features

- Job splitting
- Reliable print job distribution
- Queue management
- Global printer cluster diagnostics
- Intelligent load balancing
- Printer and cluster prioritizing

Usage Areas

- Replacing single, expensive, high-speed printers
- Mission critical printing
- Volume printing

Printer Compatibility

- Any PCL 5/5e/5c/6/PS/Windows GDI compliant Samsung printers and MFPs
