

Alliance for Water Stewardship (AWS) Commitment

In accordance with the company-wide environmental, health and safety management policy, Samsung Electronics' DX division* recognizes the importance and social responsibility of water resources and promotes the acquisition of AWS certification to lead the realization of sustainable water management.

* Korea (Suwon, Gumi, Gwangju), Vietnam (SEV, SEVT, SEHC), India (SIEL-P(C/N)) etc.,

We are committed to consider conserving water and realizing a sustainable society our top priorities.

- We are committed to conserving and protecting water while making ongoing improvements by monitoring the quality and quantity of water.
- We are committed to ensuring the sustainability of water through minimization of water use and efficient management.
- We are committed to prevent water-related risks by improving the understanding of water management and evaluating its impact.
- We are committed to continuously strengthen sustainable water management for internal and external supply chains.

We are committed to actively conserve water to acquire AWS certification.

- We are committed to recognize a watershed-level of common water problems, risks, impacts, and opportunities and collect data.
- We are committed to establish supportable water management programs and plans that meet existing watershed management plan.
- We are committed to promote the realization of water management programs and plans and while allocating human and material resources.
- We are committed to regularly evaluate and report water management performance and establish improvement plans.
- We are committed to openly communicate with stakeholders and transparently disclose related information to the public regarding the water management performance.

We are committed to achieve sustainable water management through compliance with AWS standards.

- We are committed to identify stakeholders and establish governance to resolve common water issues.
- We are committed to balance water flow, by reviewing potential risks and maintain stable water balance.
- We are committed to comply with water-related regional legal requirements and apply strict water quality standards.
- We are committed to identify important water-related areas and communicate openly with stakeholders for continuous improvement.
- We are committed to ensure safe and sufficient use of water and guarantee basic water rights.
