

DIABETES MANAGEMENT MADE EASIER.

Glooko Diabetes Management System

Glooko transforms the way healthcare professionals and their patients interact and manage diabetes by leveraging the power of an integrated mobile platform. Glooko's FDA 510(k)-cleared, HIPAA-compliant hardware and software solution modernizes diabetes management by building bridges between patients, providers and health systems. Glooko works with payers and health systems to improve glycemic control across their diabetes population with a combination of mobile and in-clinic solutions.

Health systems and disease management organizations use the Glooko system to identify high-risk patients and provide timely interventions that improve outcomes and reduce costs. The Glooko system can be used in a kiosk mode within clinical settings and remotely by patients.

The Glooko Diabetes Management system is powered by a mobile and web platform that extends from the patient to the healthcare provider and health system.

Key Features

- FDA-cleared and HIPAA-compliant
- Supports downloads from all major blood glucose meters
- Enables tracking of key diabetes behaviors (e.g., carbohydrates, medication, insulin, activity and goals)
- Creates automatic logbook and population dashboard
- Supports global standards on blood glucose measurements, including mg/dL and mmol/L
- Operates on numerous Samsung devices
- Supports integration with EHRs and other systems

Customer Benefits

- Patient and other information is accurate and secure
- Flexibility to use system in a clinical setting or remotely
- Works with various glucose meters and wireless devices
- Involves patient directly and effortlessly in data collection and monitoring process
- Providers spend less time searching for data and more time interpreting patient needs
- Improves communication and information sharing between patients, providers and health systems
