

EHS Policy

Samsung Electronics, Inc. promote development of a sustainable society by maintaining safe and secure work environment and protecting environment at large, guided by Samsung Business Principle, which states our commitment to care for environment, health and safety. We must always first take the safety and protection of our employees, customers and environment into consideration from development to production of our products.

■ Strengthen global environment and safety management system

We comply with all environment, safety & health, energy regulations and agreements of the countries where we operate and apply internal management standards in all business activities to prevent EHS accidents. We train and educate our employees to become familiar with our EHS management system. Also, we aim to transparently communicate our EHS policy and performance to internal and external stakeholders.

■ Be responsible for the entire lifecycle of our products

We do not purchase raw materials, parts, and packaging materials containing hazardous materials.

We design and manufacture our products to increase efficiency, reuse, and recycling to decrease environmental impact.

■ Establish eco-friendly manufacturing

We are committed to minimize the release of greenhouse gas emissions and pollutants through adopting the optimal clean manufacturing technologies to reduce use of chemicals, energy and water resources, and to encourage reuse and recycling of wastes (including water, chemical, solid, etc.)

■ Maintain safe and secure work environment

Every employee has a responsibility to encourage and promote safety culture and participate in health and safety improvement activities, such as regular physical examination, to establish safe and secure workplace. Also, we should protect all employees and community members from external risk factors (natural disaster, fire accident, communicable disease, etc.) and maintain an emergency response system.

■ Develop partnerships to promote shared growth

With our partner companies, we encourage them to comply with our supplier code of conducts and sharing EHS management system and technology to create eco-friendly business partnerships.

With our community at large, we are committed to communicate with them in transparent and honest matter and take extra efforts to promote community development.
